

0-25mm Precision Outside Micrometer

This precision outside micrometer features a painted frame for enhanced durability and corrosion resistance. It is designed for accurate measurements in engineering, manufacturing, and quality control applications, offering a 0-25mm measuring range with 0.01mm resolution.

Overview

Precision Engineering Tool

This precision outside micrometer is engineered for high-accuracy measurements in demanding industrial environments. Featuring a durable painted frame for enhanced corrosion resistance, it is an essential instrument for quality control, manufacturing, and general engineering applications. Its robust design ensures reliable performance and consistent results.
