

10 HP Air-Cooled Single-Cylinder Diesel Engine

This 10 HP air-cooled diesel engine features a single-cylinder design. With direct injection, it ensures efficient fuel combustion and reliable performance for power generation.

ADDITIONAL IMAGES

Overview

High-Performance Diesel Power

The KA186FA is a robust 10HP air-cooled single-cylinder diesel engine engineered for reliability and efficient power generation. Featuring a direct injection system, this unit provides consistent performance across diverse industrial applications, including water pumps and generators. Its compact design and air-cooled architecture ensure ease of maintenance and durable operation in demanding environments.

Technical Specifications

Rated Power

10 HP

Horsepower

Cooling Type	Air-cooled
Engine Configuration	Single-cylinder, 4-stroke
Fuel Delivery	Direct Injection

Application & Usage

Safety Precautions

- Read manual carefully before operation
- Prevent exhaust gas inhalation
- Extremely flammable fuel
- Keep out of reach of children

Ideal Applications	Power Generation, Water Pumps, Industrial Equipment
