Washing Machine Dryer Control Circuit Board

This control circuit board is designed for washing and drying machines. The board manages the operation of various machine functions, including motor control, water level sensing, temperature regulation, and display interface.

Product Overview

Smart Appliance Control Module

This advanced control circuit board acts as the central brain for washing and drying machines, orchestrating complex cycles and operational safety. Designed to manage critical functions like motor speed, water level detection, and precise temperature regulation, it ensures reliable performance across diverse laundry tasks. The integrated microcontroller supports seamless display interface interaction, providing a robust solution for professional repair and appliance maintenance.

Technical Specifications

Integrated Functions

- Motor control
- Water level sensing
- Temperature regulation
- Display interface management

Controller Type	Microcontroller-based integrated circuit

Compatibility

Series Support Matrix

Series Category	Status
SAMSUNG-55 to 65	Supported
LITTLESWAN-1 to 4B	Supported

Compatible Model Identifiers	45C1CR-07, 48S7-01, 45-99JT1, 50S7A-01, 52S7A-01, 30-8, 82, 885A, 28G, 78G
