240L Thermosyphon Solar Water Heater

This solar water heater utilizes a thermosyphon system for efficient water heating. It is designed for residential use and holds up to 240L of water.

240L thermosyphon system

Overview

Sustainable Hot Water Solution

The 240L Thermosyphon Solar Water Heater provides a highly efficient and environmentally friendly method for domestic hot water production. Utilizing natural circulation principles, this system harnesses solar thermal energy to reliably heat water without relying on complex pumps or electrical components. It is an ideal installation for residential properties seeking long-term energy savings and reduced operational costs.

Technical Specifications

Tank Capacity

240 L
Capacity

System Architecture	Thermosyphon

Certifications and Standards

Quality Standards	Solar Energy Compliant, Residential Grade
