Automotive Transmission Fluid Reservoir

This high-quality tank is designed for automotive transmission systems. Constructed from durable materials, it features a robust design to ensure long-lasting performance and reliability.

Product Overview

High-Performance Transmission Reservoir

This automotive transmission fluid reservoir is engineered for reliability and long-term durability in demanding vehicle systems. It features a robust construction designed to withstand harsh operating environments while maintaining fluid integrity. The unit comes finished with a vibrant red coating that provides enhanced corrosion resistance and a professional appearance.

Technical Specifications

Included Components

- Filler cap
- Mounting hardware

Finish/Coating	Red corrosion-resistant coating
Application	Automotive, Transmission System
