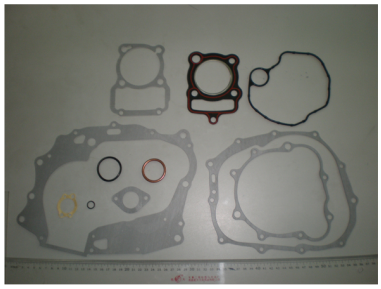
Engine Gasket Set for Pumps and Machinery

This engine gasket set is designed for use in pumps and general machinery applications. It includes head gaskets, base gaskets, and various smaller seals for oil and coolant passages to create tight seals between engine components, preventing leaks and maintaining optimal engine performance.



Product Overview

Comprehensive Sealing Solution

This engine gasket set is engineered specifically for pumps and general machinery applications. It provides a complete array of seals required to create tight, reliable connections between engine components, effectively preventing leaks of oil and coolant. Designed for demanding operating conditions, this set ensures optimal engine performance and longevity.

Technical Details

Kit Components

- Head gaskets
- Base gaskets
- Oil passage seals
- Coolant passage seals

Part Number	12251F-U1207
Materials Used	Paper, Rubber, Copper, Composite Materials

Application

Primary Applications

Pumps • General Machinery

Key Performance Benefits

- Leak prevention
- Maintains optimal engine performance
- Reliable sealing under demanding conditions
