

120L Rubber Internal Mixer

This 120L internal mixer is designed for rubber and similar material processing. It features a robust design for efficient mixing and kneading.

Overview

High-Capacity 120L Rubber Internal Mixer

This 120L Banbury mixer is engineered for high-performance rubber processing, offering a robust solution for compounding, mixing, and kneading applications. Its heavy-duty vertical design and sophisticated hydraulic pressure system ensure consistent material processing and operational durability. Designed for industrial environments, this machine provides the reliability and precision required for demanding production workflows.

Technical Specifications

Mixing Chamber Capacity

120 L

Volume

Equipment Type	Rubber Internal Mixer / Banbury Mixer
Primary Applications	Rubber Compounding, Mixing, Kneading

Design & Construction

Key Design Features

- Robust vertical design
- Integrated hydraulic pressure system
- Heavy-duty industrial construction
- Sophisticated pipe and control network
