

125cc Four-Stroke Single Cylinder Engine

This 125cc four-stroke engine is a single-cylinder engine commonly found in scooters and ATVs. It has a forced air-cooled system and provides a balance of power and fuel efficiency.

Overview

Reliable 125cc Four-Stroke Engine

The 125cc four-stroke single-cylinder engine is a versatile power unit designed for scooters, ATVs, and small recreational vehicles. Featuring a forced air-cooled system, this engine is engineered for a balance of consistent power output and fuel efficiency. Its compact design and robust construction ensure ease of maintenance, making it an ideal choice for urban transportation applications.

Technical Specifications

| | |
|----------------|------------------------------|
| Engine Type | Four-stroke, single cylinder |
| Displacement | 125 cc |
| Cooling System | Forced air-cooled |

Performance & Features

Suitable Applications

- Scooters
- ATVs
- Small recreational vehicles
- Urban transportation

Key Features

Automatic Transmission, Electric Starter, Carburetor System
