

13 HP Gasoline Engine

This 13 HP gasoline engine is designed for a variety of power generation and industrial applications. Its durable construction and efficient combustion system ensure long-lasting performance and optimal fuel economy.

Overview

High-Performance Gasoline Engine

This 13 HP gasoline engine is engineered for reliability, durability, and strong power output. Featuring an overhead valve (OHV) design and an efficient air-cooled system, it ensures optimal fuel economy and consistent performance for demanding industrial applications. With built-in safety features like automatic low oil level cut-off, this engine is a dependable choice for generators, water pumps, and heavy-duty equipment.

Technical Specifications

Power Output

13 HP

Horsepower

Engine Type

Single-cylinder, 4-stroke, Air-cooled

Starting System

Recoil Start, Electric Start

Features

Safety & Protection

- Automatic low oil level cut-off
- Air-cooled thermal management
- Overhead Valve (OHV) design for reduced emissions

Operational Benefits

Low Fuel Consumption • Low Noise • Energy Saving • Environmental Protection
