

13500kW Synchronous Electric Motor

This is a 13500kW synchronous motor. It is designed for industrial applications requiring substantial power output.

Overview

High-Capacity Industrial Performance

This large synchronous motor is engineered for industrial applications that demand substantial power output and high-efficiency energy conversion. With a robust construction designed for reliability, it is built to withstand demanding environments. This unit is ideal for driving heavy machinery and is suitable for integration into various transmission and distribution systems.

Technical Specifications

Rated Power

13500 kW
Power Output

Motor Type

Synchronous Electric Motor

Suitable Applications

Heavy Machinery, Industrial Transmission, Power Distribution
