

140 Series Gas Engine Generator Set

The 140 Series gas engine is a high-speed, high-performance engine developed for demanding applications. Widely used in oil vehicle drilling rigs, wellsite generator sets, and mobile power stations, it meets TIER2 and European b emission standards.

Overview

Industrial Power Generation

The 140 Series Gas Engine Generator Set is engineered for robust, stationary power generation in demanding industrial environments. Designed for both continuous and standby operation, this unit features a heavy-duty steel frame construction to ensure durability and stability. The integrated control panel allows for precise monitoring and adjustment, making it a reliable solution for critical power needs.

Technical Specifications

Fuel Type

Gas Engine

Series

140 Series

Application

Stationary Power, Continuous Operation, Standby Operation

Construction & Design

Frame Construction

Heavy-duty steel frame

Generator Housing

Tan-colored industrial enclosure with ventilation grills

Control & Monitoring

Control System

Integrated control panel for monitoring and adjustment
