

140W Polycrystalline Half-Cell Solar Panel

This polycrystalline solar panel provides 140W power output. It uses half-cell technology for improved performance and increased durability.

Product Overview

High-Efficiency Energy Conversion

This 140W polycrystalline solar panel utilizes advanced half-cell technology to provide enhanced performance and durability. Designed for optimal energy conversion, it is suitable for a wide range of residential, commercial, and industrial solar power systems. The robust frame and high-quality construction ensure reliable, long-term power output even under varying environmental conditions.

Technical Specifications

Rated Power

140 W

Rated Output

Cell Technology

Polycrystalline Half-Cell

Cell Configuration

144 cells

Application & Features

Key Benefits

- Enhanced power output via half-cell design
- Robust frame for secure installation
- High durability in environmental conditions
- Long-term performance stability

Suitable Applications

Residential, Commercial, Industrial
