

150W RF Coaxial Termination Load DC-4GHz

High-frequency coaxial load designed for absorbing RF and microwave energy with minimal reflection. Features include a power rating of 150W and a frequency range of DC-4GHz and is constructed with a heat sink for efficient thermal dissipation.

Product Overview

High-Performance RF Termination

This high-frequency coaxial load is engineered for the efficient absorption of RF and microwave energy while maintaining minimal signal reflection. Designed with a robust integrated heat sink, it ensures reliable thermal dissipation during operation. It is an essential component for testing and termination applications within professional communication systems.

Technical Specifications

Power Rating

150 W

Power Rating

Frequency Range

DC-4GHz

Application Areas

RF Testing, Microwave Systems, Communication Systems, Signal Termination

Design Features

Model Series

TF150

Thermal Management

Integrated Heat Sink
