

20L Bottle Washing Filling Capping Machine

This automatic machine is designed for washing, filling, and capping large 20L bottles. It integrates multiple processes into a single automated system for efficient and hygienic bottle processing.

Overview

Automated 20L Bottle Processing Solution

This automatic washing, filling, and capping machine is engineered specifically for large 20L bottles, integrating multiple production stages into a single, highly efficient system. Designed for durability and hygiene, it features stainless steel construction and a robust conveyor system to ensure seamless bottle transport. With precision filling mechanisms and secure capping heads, it is an ideal solution for high-volume production lines in the beverage, chemical, and food industries.

Key Performance Metrics

Compatible Bottle Size

20 L

Capacity

Integrated Processes

Washing, Filling, Capping

Technical Specifications

Core Components

- Conveyor system
- Washing nozzles
- Precision filling mechanisms
- Capping heads
- Control panel

Suitable Industries

Beverage • Chemical • Food

Material

Stainless Steel
