

220KVA MFDC Resistance Spot Welder

The 220KVA MFDC welder is designed for welding base legs. It utilizes MFDC technology to provide precise and efficient welding performance.

Overview

High-Efficiency MFDC Welding Solution

This 220KVA Medium Frequency Direct Current (MFDC) resistance spot welder is engineered specifically for high-precision welding applications, particularly in the compressor industry for base leg assembly. Utilizing advanced MFDC technology, the system delivers consistent weld quality, reduced spatter, and superior energy efficiency compared to traditional welding methods. Designed for industrial manufacturing environments, it features robust pneumatic clamping and automated positioning to ensure reliable, high-volume production.

Technical Specifications

Rated Capacity

220 KVA

Rated Capacity

Power Supply	380V / 3I / 50Hz
Max Primary Current	100 A
Max Short Circuit Current	40 KA
Max Working Pressure	11.8 KN

Dimensions & Build

Dimensions (LxWxH)	2473 x 1600 x 1126 mm
--------------------	-----------------------

Features

Key Features

- MFDC technology for energy efficiency
- Pneumatic cylinders for automated clamping
- Integrated control panel for precise parameter adjustments
- Safety-enclosed design with warning indicators
- Sturdy base construction for operational stability
