

22HP V-2 Diesel Engine

This 22HP V-2 diesel engine is air-cooled. It is designed for robust performance and reliability in demanding environments and various industrial and machinery applications.

Overview

Robust Performance for Demanding Environments

The 22HP V-2 diesel engine is engineered for reliability and consistent performance in a variety of industrial and machinery applications. Featuring a powerful V-2 configuration and a specialized cooling fan system, this engine is built to withstand rigorous operating conditions. With its compact design and robust architecture, it serves as a dependable power source for professional equipment.

Technical Specifications

Power Output

22 HP

Rated Power

Engine Configuration	V-2, Diesel
Model Identification	AR-192DL

Features

Integrated Components

- Cooling fan system
- Black air filter assembly
- Primer system
