

2mm Reduced Thickness Clear Glass

This clear glass is manufactured to be 2mm less thick than standard glass. The reduced thickness provides a lighter weight option for certain applications.

Product Overview

High-Clarity Reduced Thickness Glass

This 2mm clear glass is engineered for applications requiring a reduced profile compared to standard glass thicknesses. Designed for precision and clarity, this material maintains structural integrity while offering a thinner alternative for specialized building and engineering projects. It is an ideal solution for components where weight reduction and space-saving are critical requirements.

Technical Specifications

Thickness	2 mm
Material Type	Clear Glass
Key Features	Reduced Thickness, High Clarity, Precision Engineered
