

30 m³/h Concrete Mixer with Integrated Pump

This concrete mixer combines the functions of mixing and pumping concrete. It is designed for small to medium-sized construction projects.

Overview

Compact On-Site Concrete Solution

This 30 m³/h concrete mixer with an integrated pump is designed for efficiency on small to medium-sized construction projects. It combines mixing and pumping capabilities into a single mobile unit, allowing for seamless on-site concrete preparation and placement. The trailer-mounted design ensures easy transportation, while the integrated hydraulic and electric systems provide stable operation for residential and small-scale infrastructure builds.

Performance Metrics

Key Performance Indicators

30 m³/h

Theoretic Output

130 m

Delivery Height

320 m

Delivery Distance

Technical Specifications

Pumping System Details

Parameter	Value
Theoretic outlet pressure	8 Mpa
Pumping frequency	15 times/min
Distribution valve	S Valve

Design & Usage

Best For

Small Construction Projects, Residential Building, On-site Mixing, Concrete Placement
