

32x Magnification Automatic Optical Level

This optical level provides 32x magnification and automatic self-leveling for precision. It is designed for leveling, alignment, and determining elevation differences in construction and surveying.

Overview

Precision Optical Leveling

This 32x magnification automatic optical level is engineered for high-precision leveling and alignment tasks in surveying and construction. It features a stable magnetic damping self-leveling system that ensures accuracy even in demanding environments. Built with an IP54 protection class, the device is shielded against splashes from any direction, making it a reliable tool for professional field use.

Technical Specifications

Ingress Protection

IP54

Magnification

32 x

Leveling Mechanism

Magnetic damping self-leveling

Features

Key Features

- Precise rotation for accurate body positioning
- High magnification optics
- Shake-proof design
- High accuracy measurement
