

400W Solar Panel for Commercial and Residential Use

This 400W level module is designed for business use outside of utility-scale applications. The high-performance photovoltaic module features advanced cell technology for increased efficiency and power output.

Product Overview

High-Performance Solar Solution

This 400W photovoltaic module is engineered specifically for non-utility business environments, including both residential and commercial rooftops. By utilizing advanced cell technology, the panel delivers superior efficiency and power output while maintaining reliable performance under varying environmental conditions. Its durable construction ensures longevity for grid-tied solar systems, providing a robust energy solution for professional-grade installations.

Technical Specifications

Rated Power Output

400 W

Power Output

Design Optimization

Non-utility scale • High efficiency • Robust construction

Target Applications

Commercial, Residential, Grid-tied Systems
