

# 40x40x28mm Inverter Fan for Electronic Cooling

This compact inverter fan is designed for cooling electronic components. It features a square frame with mounting holes and is constructed from durable plastic.

## Product Overview

### Compact Cooling Solution

This 40x40x28mm inverter fan is engineered specifically for the efficient cooling of electronic components and systems. Its compact square frame design allows for easy integration into space-constrained environments while providing reliable heat dissipation. Constructed from durable materials, this fan is a robust choice for maintaining optimal operating temperatures in various electronic devices.

## Physical Dimensions

### Dimensions

**40 mm**

Length

**40 mm**

Width

**28 mm**

Depth

### Mounting

Square frame with corner mounting holes

## Construction

### Material

Durable plastic

## Applications

### Primary Applications

Electronic Cooling, Inverter Systems, Component Heat Dissipation
