

45 Amp Double Pole Switch

This double pole switch is designed for high current applications and is rated at 45 amps. It is typically used in electrical installations for controlling appliances and equipment with higher power demands, ensuring reliable and safe operation.

Product Overview

High-Performance Double Pole Switch

This 45 Amp double pole switch is engineered for demanding high-current applications, ensuring reliable control for heavy-duty electrical circuits. Designed to safely disconnect both live and neutral lines, it is an essential component for installations requiring robust power management. The durable construction makes it suitable for a wide range of industrial, commercial, and residential environments where safety and consistent performance are paramount.

Technical Specifications

Rated Current

45 A

Rated Current

Safety Functionality

- Live and neutral disconnection
- Robust housing for environmental protection
- High-current handling capability

Switch Type

Double Pole

Suitable Environments

Industrial, Commercial, Residential
