Overview

Engine Assembly Overview

The 4D56 long block is a comprehensive engine assembly designed to restore or upgrade vehicle performance. It includes the cylinder block, cylinder head, crankshaft, connecting rods, pistons, camshaft, and valve train, providing a complete solution for engine rebuilds. Engineered to meet or exceed OEM specifications, this unit offers a reliable and durable power source suitable for light-duty trucks, vans, SUVs, and various industrial applications.

Technical Details

Included Components

- Cylinder block
- Cylinder head
- Crankshaft
- Connecting rods
- Pistons
- Camshaft
- Valve train

Engine Type

Diesel

Common Applications

Light-duty trucks, Vans, SUVs, Industrial machinery

Performance & Quality

Quality Standards

OEM Specifications • Durable Construction

Key Benefits

- Simplified installation and replacement
- Reduced repair complexity
- Cost-effective engine restoration
- High reliability
