

5-Ton Automatic Hydraulic Decoiler

This 5-ton automatic hydraulic decoiler is designed for uncoiling metal coils in industrial applications. Its hydraulic system ensures smooth, controlled decoiling, accommodating coils up to 5 tons and enhancing productivity.

Overview

High-Efficiency Automatic Decoiler

This 5-ton automatic hydraulic decoiler is engineered for precision and reliability in roll forming and metal processing environments. Designed with a robust structure, it features an automated hydraulic system that ensures smooth, controlled material feeding while minimizing manual labor. Its high efficiency and low-noise operation make it an ideal solution for continuous production lines requiring consistent coil handling.

Technical Specifications

Robust steel frame construction with adjustable coil mechanism.

Hydraulic system designed for smooth and controlled decoiling operations.

Bearing Weight	5 T
Feeding Roller Width	1350 mm
Hydraulic Pump Power	3 KW
Total Machine Weight	4.8 T
Dimensions	2m x 5m x 2.5m

Key Features

User-friendly controls allow for easy operation and adjustment.

Key Benefits

- Simple and robust structure
- High working efficiency
- Low noise operation
- Easy setup and operation
