

50mm Diameter Test Sphere

This sphere verifies the degree of protection against solid foreign objects with a 50mm diameter. It is intended for testing enclosures.

Product Overview

Precision Testing Solution

This 50mm diameter test sphere is a precision-engineered instrument specifically designed to verify the degree of protection offered by electrical enclosures. It is used to test against the ingress of solid foreign objects with a diameter of 50mm or greater, ensuring compliance with international safety standards. This essential tool is ideal for manufacturers and testing laboratories requiring accurate and reliable safety verification.

Technical Specifications

Test Object Size

50 mm

Minimum Object Diameter

Diameter	50 mm
Compliance Standards	IEC 61032
Application	Verification of protection against ingress of solid foreign objects
