

6.5 HP Gasoline Engine

The 6.5 HP gasoline engine is engineered for applications requiring a reliable power source. It is suitable for generators, water pumps, tillers, and other small machinery.

Product Overview

Reliable Power Solution

The XY168F is a 6.5hp gasoline engine designed for various applications requiring a reliable power source. This engine features a durable construction, efficient combustion, and an easy starting mechanism. It is engineered for optimal performance and long-lasting operation, making it suitable for use in generators, water pumps, tillers, and other small machinery.

Technical Specifications

Power Output

6.5 HP

Horsepower

Fuel Type

Gasoline

Model Number

XY168F

Applications

Suitable Applications

- Generators
- Water pumps
- Tillers
- Small machinery
