

750W Submersible Sewage Pump

This submersible pump is designed for efficient wastewater and sewage removal. The 750W motor delivers high-performance pumping action for drainage, construction sites, and septic systems.

Overview

High-Performance Submersible Sewage Pump

This 750W submersible sewage pump is a robust solution designed for efficient wastewater and sewage removal. Engineered for demanding environments, it features a durable construction that ensures longevity and reliable performance in drainage, construction sites, and septic systems. The inclusion of an automatic float switch prevents dry running, while the specialized impeller design effectively handles solids and debris.

Technical Specifications

Rated Power

750 W

Power Output

Operation Mode

Automatic • Submersible

Voltage

220V

Features

Key Features

- Automatic operation via integrated float switch
- Solid-handling impeller design
- Compact form factor for tight spaces
- Dry-run protection

Applications

Recommended Applications

Wastewater Removal, Sewage Systems, Drainage, Construction Sites, Septic Systems
