

8-Port Telephone Line Interface Device

This device provides the user telephone line (including pipelines) for any building needs. It features standard RJ45 connectors for each line, enabling easy integration with existing telephony infrastructure.

Product Overview

Professional Telecommunication Interface

This 8-port telephone line interface device is engineered for professional telecommunication infrastructure. It facilitates streamlined management and distribution of up to eight individual communication channels. Designed for reliability, the unit ensures efficient voice and data transmission in complex engineering environments.

Technical Specifications

Port Capacity	8 ports
Connector Type	RJ45
Ideal Applications	Telecommunication Engineering, Voice Transmission, Data Transmission, Infrastructure Integration

Quality and Compliance

Compliance and Quality

- Advanced construction standards
- Reliable quality assurance
- Environmental protection
- Construction safety compliance
