

90-Degree Liquidtight Conduit Connector

This 90-degree liquidtight connector is designed for connecting flexible metallic conduits to electrical boxes or enclosures in wet locations. The durable metallic construction provides corrosion resistance and long-lasting performance, while a sealing ring ensures a watertight seal.

Product Overview

Reliable Liquidtight Connection

These 90-degree liquidtight connectors are engineered for securely bonding flexible metallic and non-metallic liquidtight conduits to electrical boxes or enclosures. Designed for both wet and damp environments, they feature a specialized gripping mechanism that ensures a strong, liquidtight seal while preventing conduit pullouts. The components are fully reusable and easy to disassemble, making them an efficient choice for professional electrical installations.

Technical Features

Compatible Conduits

- Flexible Metallic Liquidtight Conduit
- Flexible Non-Metallic Liquidtight Conduit

Connector Angle	90-Degree
Suitable Environments	Wet Locations, Damp Locations, Industrial, Commercial, Residential

Installation & Design

Installation Advantages

Quick Installation • Reusable Components • Easy Disassembly • Pullout Resistant

Sealing Features	Includes sealing washers for threadless openings
