

# Abrasive Cut-Off Wheel

Cut-off wheels are used for cutting ferrous materials, including stainless steel, iron, and steel, as well as other metals and ceramics. They provide cutting ability, durability, and economy, and can cut a wide range of materials.

## Product Overview

### High-Performance Abrasive Cut-Off Wheels

These durable abrasive cut-off wheels are engineered for precision cutting and grinding applications across various metal types, including steel, stainless steel, and aluminum. Designed for use with angle grinders and power tools, they offer efficient material removal and consistent, clean cuts. Featuring reinforced construction, these discs are built for enhanced safety and a long operational lifespan, making them an essential tool for professional metalworkers and fabricators.

## Technical Specifications

### Application

Cutting • Grinding • Material Removal

### Compatible Materials

Steel, Stainless Steel, Aluminum

### Tool Compatibility

Angle Grinders and Power Tools

## Features

### Key Features

- Reinforced construction for enhanced safety
- Long operational lifespan
- Consistent cutting performance
- Precision engineering
