

Abrasive Fiber Disc for Metal Grinding

Abrasive fiber discs are used for grinding, blending, and finishing metal surfaces. They consist of abrasive grains bonded to a fiber backing, offering both durability and flexibility for use with angle grinders.

Product Overview

High-Performance Fiber Discs

These abrasive fiber discs are engineered for professional metal grinding, blending, and finishing applications. Constructed with high-quality abrasive grains securely bonded to a resilient fiber backing, they offer an ideal balance of durability and flexibility. Designed for use with angle grinders, they are the preferred choice for demanding tasks such as weld removal, deburring, and comprehensive surface preparation.

Technical Specifications

Construction

- Abrasive grains
- Fiber backing

Tool Type

Abrasive Fiber Disc

Primary Applications

Metal Grinding, Weld Removal, Deburring, Surface Preparation, Blending, Finishing

Compatible Equipment

Angle Grinders
