

Abrasive Flap Disc for Grinding and Finishing

Abrasive flap discs are used for grinding, blending, and finishing applications. These discs have layered abrasive flaps bonded to a backing plate and are suitable for use on angle grinders.

Product Overview

High-Performance Flap Discs

These abrasive flap discs are engineered for versatile grinding, blending, and finishing applications. Featuring layered abrasive flaps bonded securely to a backing plate, they are designed for optimal performance when used with angle grinders. The range includes multiple material types, such as aluminum oxide and zirconia alumina, to ensure the right tool for every metal surface.

Technical Specifications

Primary Applications

- Grinding
- Blending
- Finishing

Abrasive Materials

Aluminum Oxide, Zirconia Alumina

Compatibility

Angle Grinders
