

# Abrasive Flap Disc Wheel

Abrasive flap discs are suitable for grinding nonferrous metals, steels, and aluminum. They are constructed with abrasive flaps bonded to a rigid backing plate, allowing for aggressive material removal and a smooth finish.

## Product Overview

### High-Performance Abrasive Flap Disc

This high-performance flap disc is engineered for efficient grinding, blending, and finishing applications. Constructed with abrasive flaps bonded to a rigid backing plate, it offers aggressive material removal while ensuring a smooth, consistent finish. It is an ideal solution for weld blending, deburring, and general surface preparation across various metal types.

## Technical Specifications

### Available Grits

- 36
- 40
- 60
- 80
- 100
- 120
- 150
- 180
- 220
- 240
- 280
- 320
- 400

### Available Sizes (Diameter)

- 4"
- 4.5"
- 5"
- 6"
- 7"

<b>Abrasive Materials</b>	Aluminium Oxide, Zirconium Oxide
<b>Bonding</b>	Resin over resin
<b>Cloth Backing</b>	X-weight cloth

## Applications

### Compatible Materials

Nonferrous Metals • Steel • Stainless Steel • Aluminum

### Primary Applications

- Grinding
- Weld blending
- Deburring
- Surface preparation
- Finishing
