

# Abrasive Flap Wheel with Bore

Abrasive flap wheel designed for dry grinding with machines or electric tools. Constructed with aluminium oxide abrasive material, it is suitable for use on steel, non-ferrous metals, plastics, and medium-density materials.

## ADDITIONAL IMAGES

## Product Overview

### Professional Abrasive Flap Wheel

This abrasive flap wheel is engineered for efficient dry grinding operations on a wide range of surfaces. Constructed with high-quality aluminium oxide, it provides consistent material removal and durability. It is an ideal solution for processing steel, non-ferrous metals, plastics, and various medium-density materials in professional workshops.

## Technical Specifications

### Dimensions

**140 mm**  
Diameter

**25 mm**  
Width

|                         |                 |
|-------------------------|-----------------|
| Maximum Operating Speed | 5500 RPM        |
| Abrasive Material       | Aluminium Oxide |
| Grit Size               | P60             |

## Usage & Compatibility

|                    |   |
|--------------------|---|
| Suitable Materials | Steel, Non-ferrous metals, Plastics, Medium-density materials |
| Application        | Dry grinding  |
| Mounting           | Bore mount  |
