

# Abrasive Polishing Pad

Abrasive polishing pads are engineered for cleaning, grinding, and polishing workpieces. The unique netted structure ensures even contact with surfaces, preventing scratches.

## ADDITIONAL IMAGES

## Product Overview

### Professional Abrasive Polishing Solutions

These abrasive polishing pads are engineered for heavy-duty grinding, cleaning, and surface finishing applications. Featuring a unique netted structure, they provide uniform contact with workpieces to prevent scratching while maintaining high flexibility and durability. Available in multiple abrasive compositions and backing types, these pads are suitable for diverse industrial grinding and polishing tasks.

## Technical Specifications

### Available Diameters

- 50mm
- 75mm
- 100mm

### Abrasive Materials

Aluminium Oxide, Silicon Carbide, Zirconium Oxide

### Backing Materials

Cloth, Non-woven

### Bonding Agent

Resin over resin

## Applications

### Primary Applications

- Cleaning
- Grinding
- Polishing
- Surface finishing

### Performance Features

**1 High**

Kibbled Resistance

**1 Uniform**

Surface Contact
