

AC/DC Universal Motor

This universal motor is designed to operate on both AC and DC power. It is commonly used in household appliances and power tools.

Product Overview

Universal Motor Overview

This high-speed AC/DC universal motor is engineered for reliability and high performance across a variety of power tool and appliance applications. It features a robust design with high-quality pure copper windings to ensure a long operational lifespan and efficient power delivery. The motor is built with a laminated stator core to minimize eddy current losses, contributing to superior energy efficiency during operation.

Technical Specifications

Key Features

- High speed performance
- Commutation brushes included
- Eddy current loss reduction design
- Long-life reliability

Power Compatibility

AC, DC

Core Materials

Pure Copper Windings, Laminated Stator Core
