

AD56-16 Series Indicator Light

The AD56-16 series indicator lights are compact signaling devices available in various colors, including green and yellow. Designed for AC 220V operation, these indicators offer clear visual status indication in industrial and commercial applications.

Overview

AD56-16 Series Indicator Light

The AD56-16 series indicator lights are compact and reliable signaling devices designed for clear visual status indication in industrial and commercial applications. Engineered for AC 220V operation, these lights are ideal for integration into control panels, machinery, and equipment to display operational states or alarm conditions. Their robust construction ensures durability and long-term performance in demanding environments.
