

Adjustable Air Register

This air register is designed to direct airflow within HVAC systems. Its adjustable blades allow control over the direction and volume of air entering a room.

Product Overview

Professional HVAC Air Distribution

This adjustable air register is specifically engineered for precise airflow control in commercial and residential HVAC systems. Featuring a series of adjustable blades, the unit allows users to easily customize both the direction and volume of conditioned air entering a space. Built for longevity, the register is constructed from high-quality materials and finished with a robust powder coating to resist corrosion while maintaining a clean, professional aesthetic.

Technical Specifications

Construction Materials	Stamped Steel, Aluminum
Finish Type	Powder coated for enhanced corrosion resistance

Installation

Mounting Capability

- Side Wall
- Ceiling

Installation Features	Integrated mounting holes for standard duct opening compatibility
-----------------------	---

Key Features

Performance Control

2 axis

Directional Control Modes
