Product Overview

Compact Harvester Solutions

The SF160 is a compact and efficient agricultural harvester specifically engineered for small to medium-sized farms. Featuring a robust cutting mechanism and a high-performance threshing unit, it ensures effective grain separation for crops such as rice, wheat, and soybeans. Its tracked undercarriage provides superior stability and maneuverability across uneven field conditions, while the ergonomic cabin maintains operator comfort.

Identification

Article Number	SF160
----------------	-------

Key Features

Supported Crops	Rice, Wheat, Soybeans
-----------------	-----------------------

Technical Design

Main Components

- Rotating reel
- Reciprocating cutter bar
- Threshing unit
- Tracked undercarriage

Movement System	Tracked undercarriage for uneven terrain
-----------------	------------------------------------------
