

Agricultural Machinery Axle and Chassis Component

This high-precision axle and chassis component is designed for agricultural machinery. It features a splined shaft, mounting flange, and bearing surface.

Overview

High-Precision Agricultural Component

This agricultural machinery axle and chassis component is engineered for demanding field applications. It features a robust design optimized for strength and durability, incorporating precision-machined surfaces and complex geometry to handle heavy loads. Designed for reliable power transmission and secure assembly, this component is a critical part of steering, axle, and chassis systems.

Technical Specifications

Primary Applications

- Steering Systems
- Axle Systems
- Wheel Assemblies
- Brake Components
- Chassis Structures

Design Features

Splined Shaft • Machined Flange • Threaded Mounting Holes • Optimized Wall Thickness

Material Composition

Aluminum alloy casting

Manufacturing Process

Precision Casting, CNC Machining

Customization

Customization Support

Yes
