

Agricultural Product Cleaning Machine

This agricultural machinery is a specialized piece of equipment used for processing or cleaning agricultural products. It features a robust frame with pneumatic cylinders, processing stations, stainless steel tanks, and an electrical control panel for automated operation.

Overview

Industrial Agricultural Cleaning System

This specialized agricultural machinery is engineered for high-efficiency processing and cleaning of agricultural products. Featuring a robust, square-tubing frame and dual-station processing capabilities, it ensures consistent performance in demanding environments. The system integrates precise pneumatic control with advanced liquid handling components to streamline your production workflow.

Technical Specifications

Material Composition

Stainless Steel Tank • Pneumatic Components

Frame Construction

Robust square tubing

Control System

PLC Integrated, Automated Operation, Electrical Control Panel

Processing Stations

2

Operational Features

System Components

- Dual pneumatic cylinders
- Funnel-shaped intake components
- Stainless steel liquid handling tank
- Integrated piping and valve assembly

Actuation Method

Pneumatic
