

Agricultural Rotary Tiller

This product is designed for hard work and site preparation in agricultural settings. It is mainly used for rotary operations in dry land and paddy fields.

Overview

High-Efficiency Agricultural Rotary Tiller

This all-gear drive rotary tiller is engineered for versatile soil preparation in both dry land and paddy field environments. Featuring a high-intensity ductile iron gearbox and a wet-type friction plate clutch, the machine ensures reliable performance and longevity across plains, mountains, and hilly terrain. Its compact design allows for exceptional flexibility and ease of maintenance, making it an essential tool for orchards, vegetable farms, and tea plantations.

Technical Specifications

Tillage Depth	100 mm
Tillage Width	1350 mm
Weight	132 kg
Productivity	50 ha/h

System Details

Functional Capabilities

- Pumping
- Power generation
- Spraying
- Trenching
- Earth moving
- Short-distance transport

Condition

New

Power Type	Diesel
Drive System	All-gear drive
Clutch System	Wet-type friction plate clutch
