

# Air-Cooled Chiller Unit

This air-cooled chiller unit is designed for efficient cooling. Its modular design allows for flexible installation and capacity adjustment.

## Overview

### High-Efficiency Air-Cooled Chiller

This air-cooled chiller unit is engineered for professional cooling solutions, featuring a modular design that allows for flexible installation and capacity adjustments. It incorporates advanced control systems to ensure precise temperature management while maximizing energy savings. Built with robust construction, the unit is designed for durability and reliable performance across various environmental conditions.

## Key Performance Metrics

### Performance Highlights

**280 W**

Model Series

## Technical Specifications

Model Number	DLR-280W/BP1[V]
Cooling Method	Air-Cooled

## Design & Features

### Design Type

Modular Design • Advanced Control • Robust Construction

### Key Benefits

- Flexible installation and capacity adjustment
- Precise temperature management
- Significant energy savings
- Durable performance in diverse environments

## Control Systems

### Advanced Temperature Management

The unit is equipped with sophisticated control systems designed for high-precision temperature regulation, ensuring optimal operation for industrial and commercial applications.
