

Air-Cooled Single-Cylinder Motorcycle Engine

This high-performance, air-cooled, single-cylinder motorcycle engine is designed for small displacement motorcycles and scooters. It features a lightweight aluminum alloy casing and prominent cooling fins for efficient heat dissipation.

Overview

High-Performance Single-Cylinder Engine

This high-performance, single-cylinder, air-cooled motorcycle engine is specifically engineered for small displacement motorcycles and scooters. Featuring a robust construction with prominent cooling fins, it ensures efficient heat dissipation during operation. The unit is built with a lightweight aluminum alloy casing, offering an ideal balance of durability and weight reduction for various reliable power applications.

Technical Specifications

Cooling System	Air-Cooled
Cylinder Configuration	Single-Cylinder
Casing Material	Aluminum Alloy

Components & Features

Fuel System	Carburetor
Starting System	Electric Starter Motor

Application

Suitable Applications	Small Displacement Motorcycles, Scooters
