

Air Hammer Drill

Air hammer drills are pneumatic tools used for demolition and chiseling. These tools use compressed air to deliver powerful impacts for various heavy-duty applications.

Overview

Professional SMD Rework Station

This versatile rework station is engineered for precise surface mount device (SMD) soldering and rework applications. It features advanced temperature control and adjustable airflow, allowing for accurate handling of various electronic components. Designed with ESD-safe construction, it ensures the protection of sensitive electronics during repair, prototyping, and assembly tasks.

Technical Specifications

Safety Standards

ESD-Safe

Included Accessories

- Hot air gun
- Nozzle attachments

Device Category

SMD Rework Station

Control Features

Precise Temperature Control, Adjustable Airflow, Digital Display

Applications

Primary Applications

- Electronics repair
- Prototyping
- Component assembly
