

Air Handling Unit for Temperature and Humidity Control

This air handling unit maintains constant temperature and humidity levels. Its modular design includes air filtration, cooling, heating, humidification, and dehumidification components for stable air conditions.

Overview

Precision Environmental Control

This modular air handling unit is engineered for precise temperature and humidity regulation in demanding environments. Its flexible, customized design allows for seamless integration into various industrial and commercial applications. Built with a patented structure, the unit ensures long-lasting performance, low noise operation, and superior build quality.

Performance Metrics

Air Volume Capacity

2000 m3/h
Min Air Volume

300000 m3/h
Max Air Volume

Design & Construction

Customization

Fully Customizable • Non-Standard

Key Features

- Low noise operation
- Long service life
- Patented structural design
- High-quality finish
