

Air-Operated Double Diaphragm Pump

This air-operated double diaphragm (AODD) pump excels in transferring diverse fluids. Its design is particularly suited for handling abrasive and viscous materials, as well as fluids containing solids.

Product Overview

Air-Operated Double Diaphragm Pump

This air-operated double diaphragm (AODD) pump is engineered for reliable fluid transfer across demanding industrial environments. Designed to handle abrasive materials, high-viscosity fluids, and suspended solids, it offers versatile performance for sectors like chemical processing and wastewater treatment. Its self-priming capability and ability to run dry without damage ensure operational continuity and ease of use.

Technical Specifications

Pump Type	Air-Operated Double Diaphragm (AODD)
Construction Material	Metallic, Aluminum, Stainless Steel

Operational Capabilities

Key Features

- Self-priming
- Can run dry without damage
- Handles abrasive materials
- Handles viscous fluids
- Handles suspended solids

Common Applications

Chemical Processing • Wastewater Treatment • Industrial Fluid Transfer
