

Aluminum Alloy Paint Pressure Tank

Constructed from a lightweight aluminum alloy plate with an anodized surface treatment for enhanced safety. This pressure tank ensures consistent pressure and smooth delivery of paint for professional finishing.

Product Overview

Professional Paint Pressure Solution

This aluminum alloy paint pressure tank is engineered for efficient and consistent application of paints and coatings. Constructed from a single-formed aluminum alloy plate with an anode surface treatment, it offers a lightweight yet highly durable solution for professional finishing tasks. The design prioritizes safety and ease of transport, making it an ideal choice for mobile or workshop-based coating applications.

Technical Specifications

Maximum Pressure

50 PSI

Max Pressure

Material	Aluminum Alloy
Surface Treatment	Anode treatment
Construction	Single-formed

Features

Key Benefits

- Lightweight design for easy portability
- High safety standards
- Robust aluminum construction
- Anode surface treatment for durability

Safety & Compliance

Operational Safety

Max 50 PSI Limit • Professional Use Only
