

# Aluminum Bi-Metal Folding Knife with Straight Blade

This folding knife features a durable bi-metal blade, offering both hardness and flexibility. The aluminum handle provides a lightweight and sturdy grip for comfortable handling.

## Product Overview

### High-Performance Cutting Tool

This aluminum bi-metal folding knife is engineered for professionals who demand superior durability and precision. Utilizing advanced laser cladding carbide technology, the blade achieves an exceptional edge hardness of HRC68, significantly outperforming standard blades. The unique design combines a hard, sharp edge with a flexible body, ensuring the tool maintains its cutting performance up to five times longer than traditional options.

## Technical Specifications

### Edge Hardness

**68 HRC**

Maximum Edge Hardness

**5 x**

Sharpening Longevity Factor

### Construction Technology

Bi-Metal, Laser Cladding Carbide

## Design Features

### Handle Material

Aluminum

### Blade Shape

Straight

### Mechanism

Folding

## Performance Benefits

### Key Advantages

- Increased blade life
- Maintained first-cut sharpness
- Enhanced blade flexibility
- Hard edge for precision cutting
