

Aluminum Frames for Solar Panels

High-quality aluminum frames designed for solar photovoltaic modules. These frames provide structural support and protection for solar panels, ensuring their long-term durability and performance.

Product Overview

Solar Panel Mounting Solution

These aluminum frames are designed to provide robust structural support and protection for crystalline silicon solar panels. Engineered for versatility, the frames feature a wide range of adjustment capabilities to accommodate various panel specifications. By simplifying the assembly process and reducing the need for numerous spare parts, this solution effectively shortens installation working hours.

Material and Design

Material	Aluminum
Key Features	Corrosion-resistant, Lightweight, Adjustable, Easy Assembly

Application

Compatible Panel Types

- Crystalline silicon solar panels

Ideal For

Solar Energy System Manufacturers • Solar Installers
